

Robert Frost Stone House VR Experience

Exhibition: May 2024 - October 2024

Medium: VR | Unity 3D

[Link: More Information](#)

Description: The Robert Frost Stone House VR Experience is an immersive project created for children in the local area, inviting them to virtually explore the home of poet Robert Frost. Through VR, children can engage with the world of Frost, connecting with the environment that inspired much of his work. This project was developed with the belief that VR can offer a unique and engaging way for young users to experience history and poetry, making Frost's life and writings accessible and meaningful.

Through VR, children aren't just hearing or reading about Frost—they're stepping into his environment, seeing firsthand the inspiration behind his work. I had to interview the director of the Robert Frost House Stone Hosue Musume to understand how Frost was and the writings they have from him about his life at the time and how it could have looked, the farm, the horse, the bonfire and the hut. All important design elements.

Dream Garden

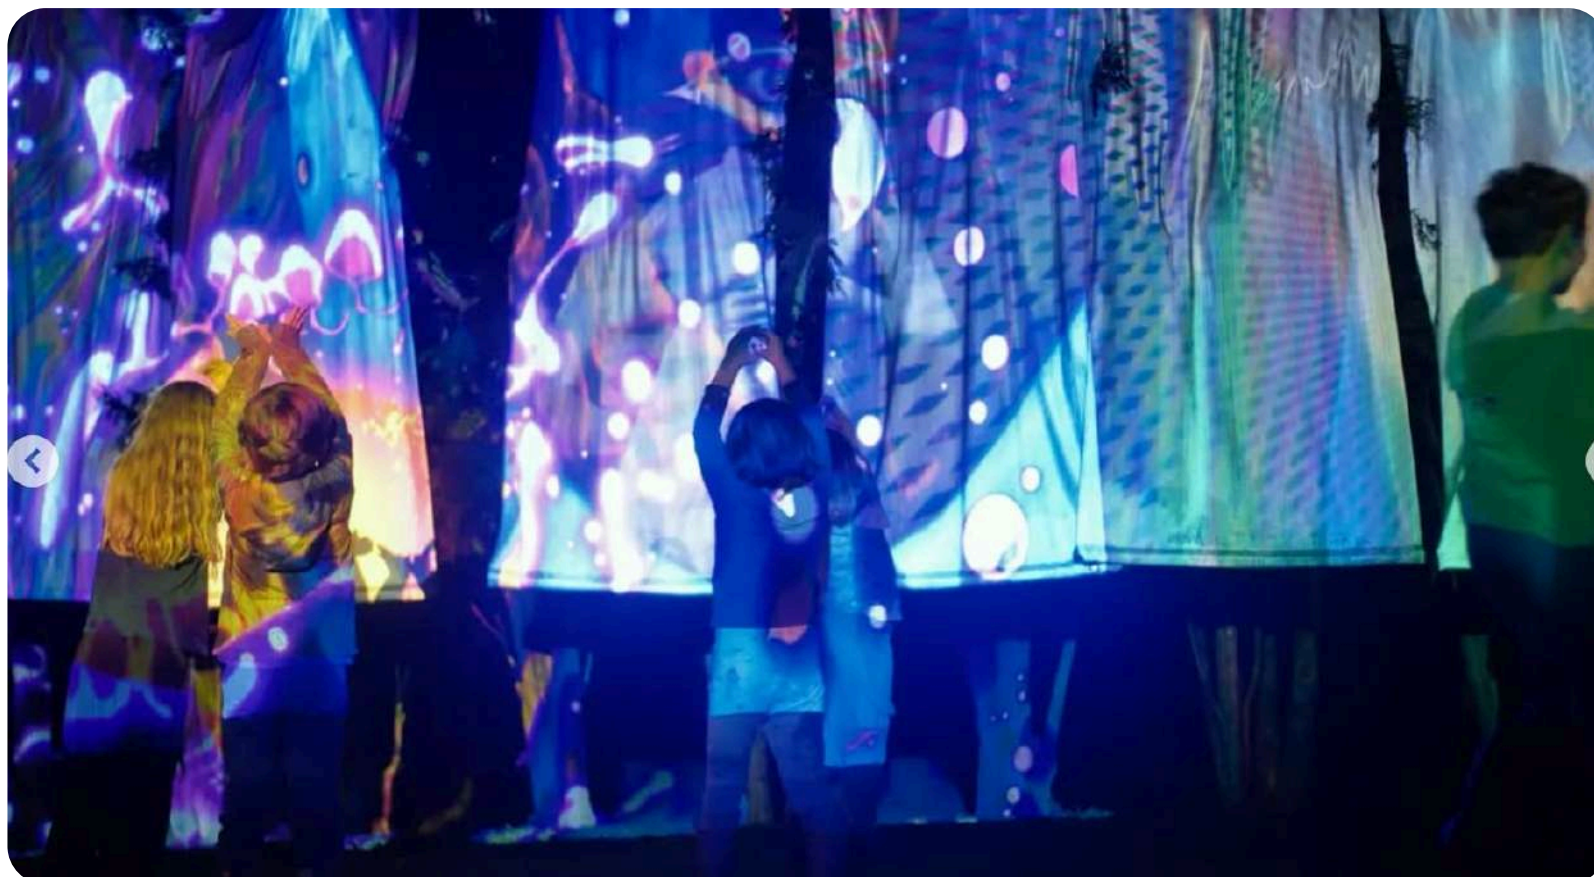

Exhibition: Nov 2023

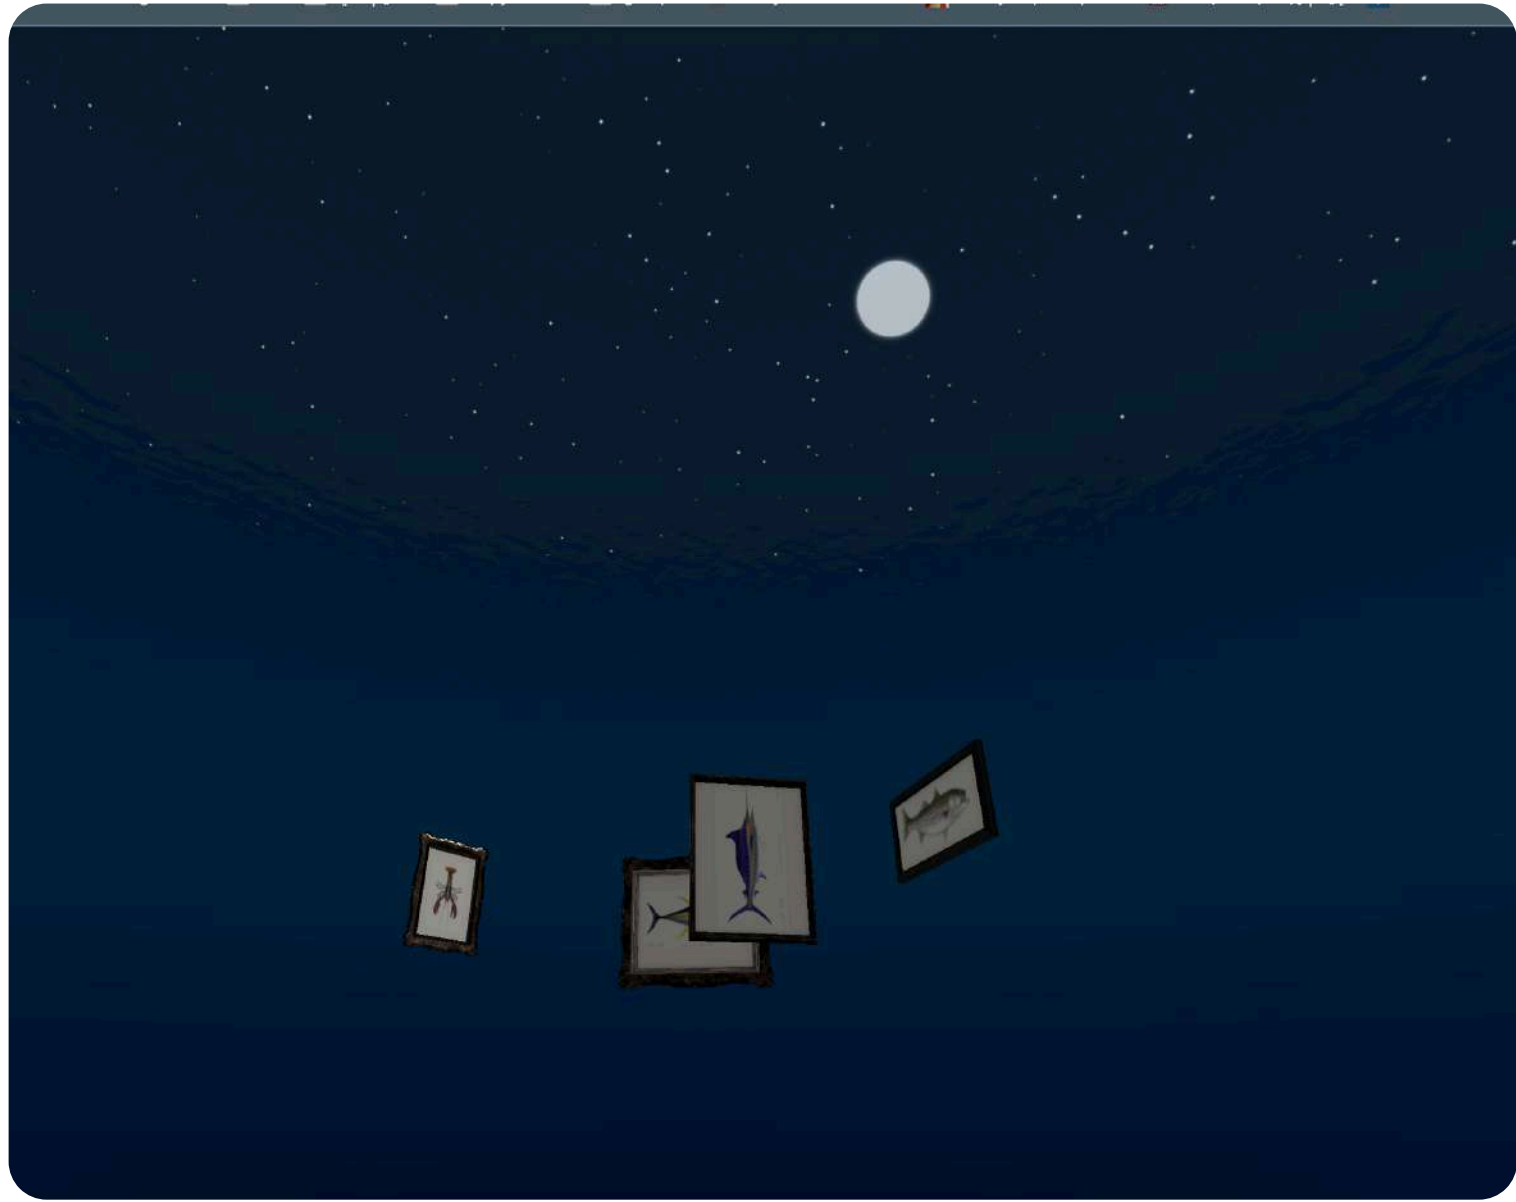

Medium: projection mapping

[Link: More Information](#)

Description: Dream Garden was an imaginative outdoor installation of light, sound, and movement in Hiland Hall Garden, North Bennington. The event invited audiences of all ages to experience a multi-sensory transformation of the garden at night. My contribution focused on projection mapping, where I used MadMapper to bring dynamic visuals to life across natural surfaces and sculptural forms. Through light and projection, I created immersive textures that responded to the environment, weaving together organic imagery with abstract movement.

To design my projections, I collaborated closely with the lead artists to align my visuals with the soundscapes and installations, ensuring the audience felt fully enveloped by the experience. My role required both technical precision mapping across irregular outdoor surfaces and creative sensitivity to highlight the garden's natural beauty. The result was a living, breathing artwork where light transformed the landscape into a shared dream space.

NICK Mayer under the water gallery

Medium: Website | Javascript three.js
Year: 2025

Link: More Information

Description: "BLKWTR Gallery" is a digital exhibition space designed to immerse visitors in an underwater art experience.

Created for artist Nick Mayer, this interactive gallery showcases his work in a setting that mirrors the fluidity and depth of the ocean. The project blends web-based interactivity with artistic storytelling, offering a unique way to engage with Mayer's marine-inspired pieces in a visually captivating digital environment. Literally, where his art comes from, the water!

Roshen AL-Hosh

Year: 2024 medium: Installation

Description: Roshen Al-Hosh is an immersive installation that leverages an Xbox 360 camera to track participants' movements in real life, which are then mirrored in the digital space of the installation. On-screen, users experience the perspective of looking through a window, with their movements enabling navigation within a confined space of 2 meters by 1 meter. This interactive piece captures the nostalgic essence of childhood moments spent gazing out a window, curious about the world outside—a reflection of my own memories. By blending technology with introspection, Roshen Al-Hosh invites viewers to reconnect with their sense of wonder and curiosity

Shug Life

Medium: VR

Year: 2024

Unity 3D

[Link: More Information](#)

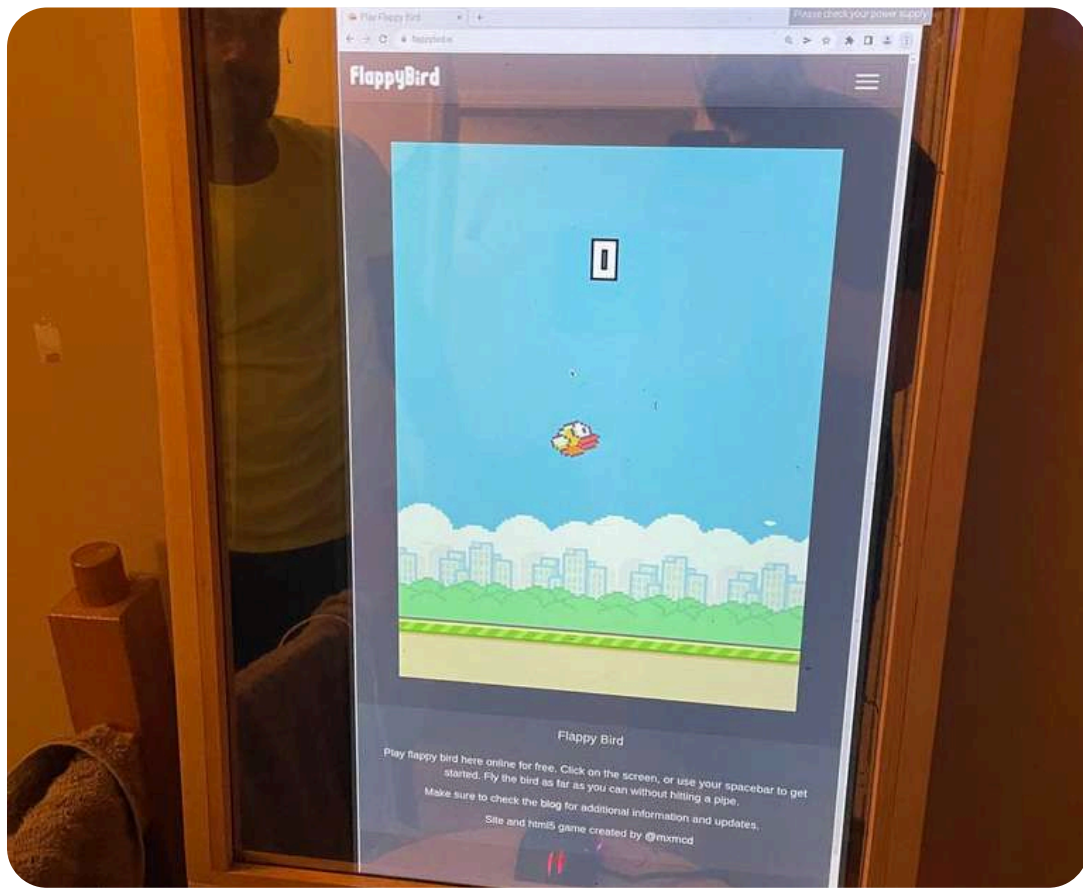

Description: Shug Life is a VR music video experience created for the track "Шуг Скриптонит" by Skryptonite, a prominent Kazakh rapper. This project reimagines the concept of a music video by placing it in an unconventional and immersive virtual reality space, challenging traditional notions of how music and visuals interact.

When I was young, I always dreamt of what a music video scene looks like. Can the environment itself become a dynamic character? This is the question this VR experience is trying to answer.

The best way to answer this question is the choice of VR as the medium for this project. It transforms the experience of conventional music video. Instead of a flat, linear narrative, "Shug Life" allows the audience to explore and engage with the space, interpreting the song through their interactions and perspectives.

This is not shared anywhere because I failed to get the approval of the artist Skryptonite

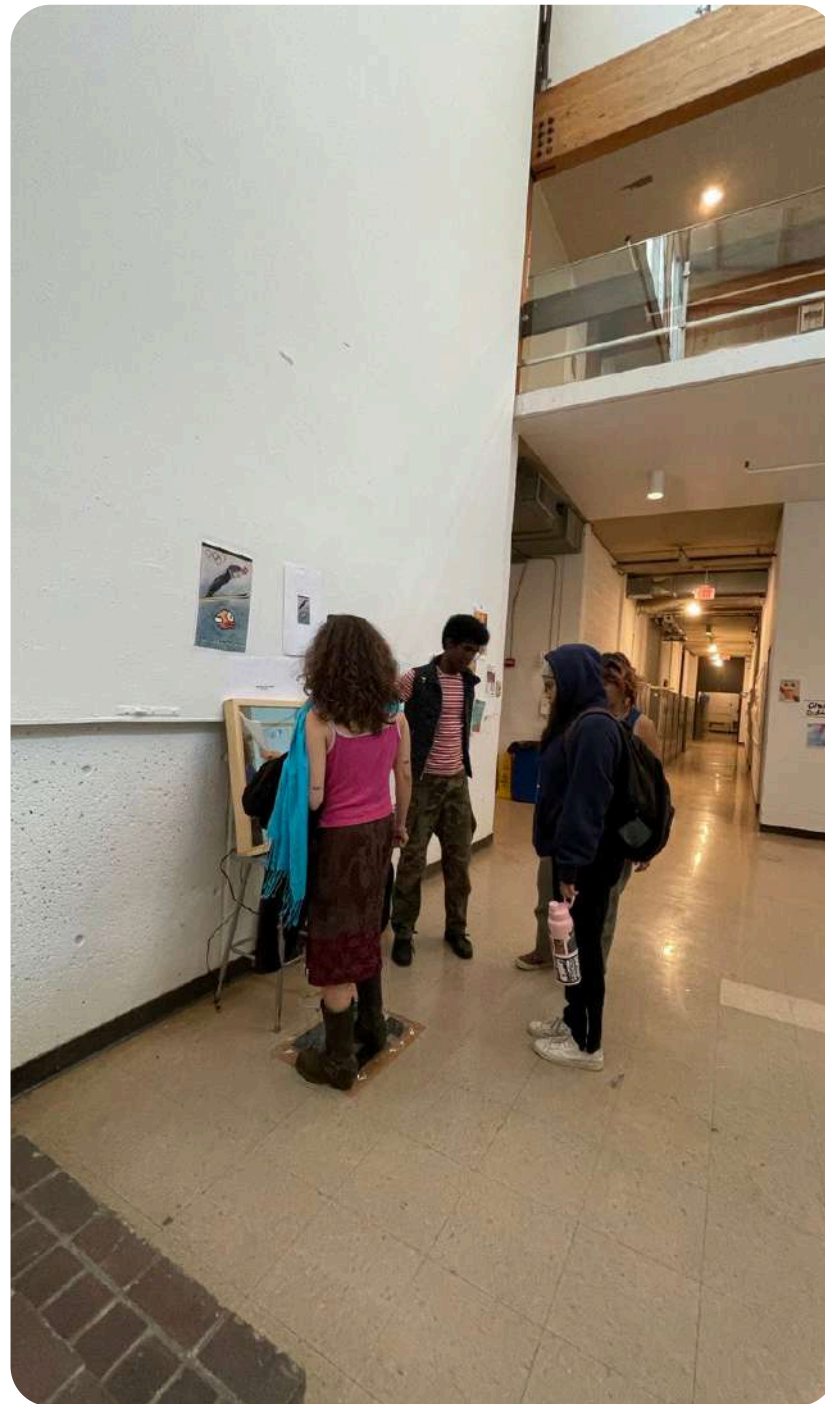

Flappy Bird

Interactive Game

Medium: Haptic Media

Year: 2023

[Link: More Information](#)

Description: A reimagining of the classic "Flappy Bird," this interactive game highlights the ability to incorporate playful, engaging elements into basic video games
